Abstracts

Semi-conductive woven tape is a type of tape that is used in the cable industry to control the electrical field around the cable conductor. It is made of a material that has a conductivity between that of a conductor and an insulator. This means that the tape can allow some electrical current to flow through it, but it will also resist the flow of current to some extent. The market is driven by several factors, including:

- Increasing demand for high-voltage cables:** The demand for high-voltage cables is increasing due to the growing adoption of renewable energy sources, such as solar and wind power. These sources require high-voltage cables to transmit power over long distances. Semi-conductive woven tape is an essential component in the production of high-voltage cables.
- Growing demand for EMI shielding:** The growing demand for electronic devices is driving the demand for EMI shielding materials. Semi-conductive woven tape is an effective EMI shielding material and is therefore being used in a wider range of applications.
- Rising demand for lightweight and flexible cables:** The increasing demand for lightweight and flexible cables is being driven by the automotive and aerospace industries. Semi-conductive woven tape is a lightweight and flexible material, making it a good choice for these applications.
- Expanding applications in power transmission and distribution:** The demand for semi-conductive woven tape is also increasing due to the expanding applications in power transmission and distribution networks. As the power grid becomes more complex and interconnected, there is a growing need for reliable and efficient cable insulation. Semi-conductive woven tape meets these requirements.
- Growing adoption of smart grids:** The growing adoption of smart grids is also driving the demand for semi-conductive woven tape. Smart grids require advanced cables that can handle the high-speed data transmission and communication required for their operation. Semi-conductive woven tape is a key component in these cables.

Overall, the semi-conductive woven tape market is expected to witness significant growth in the coming years, driven by the increasing demand for high-voltage

cables, EMI shielding, and lightweight and flexible cables. The expanding applications in power transmission and distribution, growing adoption of smart grids, and rapid urbanization in Asia Pacific will further fuel the market growth.

The global Semi-conductive Woven Tape market size was estimated at USD 443.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
