Abstracts

Semi-dry concrete agents are specialized chemical admixtures designed to modify the rheological properties of concrete mixes by reducing water content while maintaining workability, resulting in a semi-dry or stiff consistency ideal for applications such as precast elements, paving blocks, and machine-laid concrete where rapid demolding, high early strength, and minimized shrinkage are critical. These agents typically comprise water-reducing components, viscosity modifiers, and sometimes set accelerators, enabling precise control over slump and cohesion without compromising the hydration process or final mechanical properties.
