Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Semi Dull Nylon 6 Chips competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Semi dull Nylon 6 chips are polyamide resin granules that contain a controlled amount of delustrant, typically titanium dioxide (TiO₂), to reduce the natural glossiness of standard nylon 6. These chips are used as raw materials in the production of semi-matte or low-sheen synthetic fibers, offering a balance between luster and opacity. They are widely applied in textiles such as sportswear, lingerie, industrial fabrics, and tire cords, where a softer, less reflective finish is desired. In addition to modified appearance, semi dull Nylon 6 chips retain the excellent mechanical and thermal properties of nylon 6, including high tensile strength, abrasion resistance, and chemical durability. They are suitable for melt spinning into filament or staple fibers, and can also be compounded into engineering plastics.

The global Semi Dull Nylon 6 Chips market size was estimated at USD 342.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
