Abstracts

Semi-metallic sealing gaskets are composite sealing components engineered to provide robust, high-performance sealing solutions in demanding industrial applications, particularly those involving extreme temperatures, pressures, and aggressive media. These gaskets consist of a metallic core or structure?often made from materials like stainless steel, carbon steel, or specialized alloys?combined with non-metallic sealing elements such as graphite, PTFE, or elastomers, which enhance conformability and resilience. This hybrid construction leverages the mechanical strength and thermal resistance of metals with the compressibility and chemical compatibility of softer materials, making them suitable for critical sealing roles in industries such as oil and gas, chemical processing, power generation, and heavy machinery, where they prevent leaks, contain fluids or gases, and maintain system integrity under harsh operating conditions.

The global Semi Metallic Sealing Gasket market size was estimated at USD 420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
