Report Overview

Semi-open-back headphones are headphones that are more or less closed-back but don't completely seal the rear of the speaker elements, allowing the passage of some air in and out of the chamber. While this does allow the headphones to have some of the advantages of open-back headphones, they will have all of their disadvantages as well. Semi-open-backed headphones will leak sound and let noise in, though not as much as open-back headphones.
