Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Semi-Solid Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Globally, the sales of Semi-Solid Batteries reached approximately 3.2 GWh in 2024, with an average selling price of \$185/kWh. This is a transitional battery technology using polymer-inorganic composite electrolytes with electrolyte content accounting for about 10-15%. The product features relatively high energy density (280-320Wh/kg), improved thermal stability (passing 150°C hot box test) and enhanced safety, supporting 2C fast charging and -20°C low-temperature discharge. Currently mainly used in specific fields such as high-end electric vehicle models, special vehicles and energy storage systems. The semi-solid battery market is currently in the early stage of industrialization, primarily driven by increasing safety requirements and higher energy density demands in new energy vehicles. Market competition is advancing jointly by leading battery companies and startups, with product differentiation reflected in energy density, fast charging performance and cost control. Future development trends will focus on electrolyte material innovation, manufacturing process optimization and scale-based cost reduction, while moving towards higher energy density, longer cycle life and wider temperature adaptability to lay the foundation for all-solid-state battery technology commercialization.

The global Semi-Solid Battery market size was estimated at USD 593.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.20% during the forecast period.
