Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Semi-steel Rolls competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Semi-steel rolls are high-performance rolls made of a composite of cast steel and cast iron, combining the high strength and toughness of cast steel with the wear resistance of cast iron. They are widely used in universal section steel rolling mills to process beams, channels, angles, and rounds, capable of withstanding heavy loads and impacts, enhancing mill safety and stability, while extending roll life and reducing production costs. The main raw materials are cast steel and cast iron, with upstream suppliers including Baosteel, Ansteel, and Wuhan Iron & Steel, and downstream customers covering steel mills, non-ferrous metal smelters, and aluminum producers. In 2024, global production capacity is approximately 200,000 tons, sales around 120,000 tons, with an average price of about \$1,543 per ton and a gross margin of 18%-22%. With the development of the global steel and non-ferrous metals industry, demand for semi-steel rolls is expected to grow steadily.

The global Semi-steel Rolls market size was estimated at USD 185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
