Abstracts

Semi-synthetic lubricants, also known as part-synthetic or blended lubricants, are hybrid formulations that combine conventional mineral base oils with a significant proportion (typically 20?30%) of synthetic base stocks, such as polyalphaolefins (PAOs) or esters, to enhance performance characteristics. These lubricants are engineered to bridge the gap between purely mineral oils and full synthetics, offering improved oxidation stability, thermal resistance, and viscosity performance over a wider temperature range compared to mineral oils, while remaining more cost-effective than fully synthetic alternatives. They are widely used in automotive engines, industrial machinery, and marine applications where moderate to high performance is required without the premium cost of full synthetic formulations.

The global Semi Synthetic Lubricant market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
