Abstracts

Semi-synthetic motor oils, also known as blend oils or part-synthetics, are lubricants engineered through a deliberate combination of conventional mineral base oils and synthetic base stocks, typically comprising between 10% to 30% synthetic content. This formulation leverages the cost-effectiveness and adequate performance of mineral oils while integrating key synthetic properties, such as enhanced thermal stability, improved viscosity index for better performance across a wider temperature range, and superior resistance to oxidation and sludge formation compared to conventional oils alone. Designed as a mid-tier option, these oils bridge the performance gap between full mineral and full synthetic lubricants, offering better engine protection and longevity than conventional oils without the premium price tag of full synthetics, making them suitable for a broad range of vehicles, including older models and those operating under moderate driving conditions.

The global Semi Synthetic Motor Oils market size was estimated at USD 18500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
