## Abstracts

A Semi-Vertical Mouse is a type of ergonomic computer mouse designed to reduce strain on the wrist, forearm, and shoulder by positioning the hand in a more natural, handshake-like posture. Unlike a fully vertical mouse, which places the hand in a 90-degree vertical position, a semi-vertical mouse offers a tilted angle (typically between 45 and 75 degrees) that strikes a balance between traditional flat mice and fully vertical designs. This intermediate angle helps alleviate discomfort while maintaining familiarity and ease of use for those transitioning from a standard mouse.

The global Semi Vertical Mouse market size was estimated at USD 401.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
