Abstracts

Semiconductor advanced packaging lithography machines are different from front-end chip lithography machines. Advanced packaging lithography machines are key production equipment in the semiconductor packaging process (FOWLP, WLCSP, TSV, etc.). Their main function is to transfer precise circuit patterns to the packaging substrate or chip surface during the chip packaging stage to achieve high-density and high-performance electronic devices. Front-end lithography machines are mainly used in the wafer preparation process. They project the designed chip circuit pattern onto the silicon wafer through the projection method to form a tiny circuit pattern, which plays a vital role in the chip processing process and lays a good foundation for subsequent steps. The price of semiconductor advanced packaging lithography machines depends on the resolution, wafer size, etc. The resolution of lithography machines of different companies varies to a certain extent. For example, the highest resolution of K&S lithography machine is 1.2 μ m. Globally, the advanced packaging lithography machine market is mainly concentrated in the hands of several leading companies, such as K&S, Onto, Ushio, Canon, etc., and the top 5 share exceeds 75%.

The global Semiconductor Advanced Packaging Lithography System market size was estimated at USD 265.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
