Report Overview:

ALD systems is a versatile research deposition tool for thermal or energy enhanced ALD. Atomic layer deposition (ALD) is a thin-film deposition technique based on the sequential use of a gas-phase chemical process; it is a subclass of chemical vapour deposition. The majority of ALD reactions use two chemicals called precursors (also called "reactants"). These precursors react with the surface of a material one at a time in a sequential, self-limiting, manner. A thin film is slowly deposited through repeated exposure to separate precursors. ALD is a key process in fabricating semiconductor devices, and part of the set of tools for synthesising nanomaterials.

The Global Semiconductor Atomic Layer Deposition Equipment Market Size was estimated at USD 1634.02 million in 2023 and is projected to reach USD 2370.87 million by 2029, exhibiting a CAGR of 6.40% during the forecast period.
