### Report Overview

A semiconductor clock or a real-time clock (RTC) is an IC that keeps track of the current time as well as ensures the smooth functioning of electronic devices by keeping proper time among the device components. A semiconductor clock is integrated into an electronic device that requires accurate timekeeping. A semiconductor clock offers low power consumption (important when running from alternate power) and frees the main system for time-critical tasks.

The APAC region currently dominates this market. The prospects for growth in this market will be driven by the recent shift of chip manufacturing units to APAC.
