Report Overview

Etching is a process in which layers from the surface of a wafer are removed using chemicals. An etch system shapes the thin film into a desired patterns using liquid chemicals, reaction gases or ion chemical reaction. An etch system is used in manufacturing lines for semiconductors and other electronic devices. Semiconductor etch equipment is used copiously in various semiconductor fabrication processes. Among the different types of semiconductor etch equipment available in the market, dry etch equipment held the largest etch equipment market share in 2016 both in terms of revenue and volume. Reduced material consumption coupled with low cost associated with disposing the materials. However, the wet etching equipment is anticipated to experience the fastest growth rate both in terms of value and volume owing to its higher adoption rate in wafer manufacturing process due to its high etching rate and ease of operation. By equipment type the semiconductor etch equipment can be bifurcated into dry etching equipment, and wet etching equipment. The semiconductor etch equipment market size can be further segmented by etching film type into conductor etching process, & dielectric etching process, and polysilicon etching process). The market has several application areas such as logic and memory, MEMS (Micro-Electro-Mechanical Systems), power device, RFID (Radio-Frequency Identification), and CMOS image sensors.

The global Semiconductor Etching Equipment market size was estimated at USD 19610 million in 2023 and is projected to reach USD 30421.55 million by 2032, exhibiting a CAGR of 5.00% during the forecast period.
