The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Semiconductor Grade Helium Gas competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Semiconductor Grade Helium Gas is a noble inert gas of extremely high purity with tightly controlled impurity levels, widely used in wafer fabrication for heat exchange, chamber purging, and lithography systems, making it a critical material ensuring the precision of semiconductor processes. In 2024, the global production volume of Semiconductor Grade Helium Gas was 2.71 million tons, and the average price was \$50/ton. The 2024 annual production capacity per single line was approximately 10,000 tons, and the average gross margin was approximately 55%. The Semiconductor Grade Helium Gas supply chain consists of Upstream, Midstream, and Downstream segments. The Upstream segment mainly provides core cryogenic equipment and engineering technology for helium purification and liquefaction, with top supplier representatives including Linde Engineering, Air Liquide Engineering & Construction, and Air Products; the Midstream segment concentrates on the ultra-high purity refinement, analytical testing, and specialized storage and transportation of helium; the Downstream market covers microelectronics manufacturing fields with stringent gas purity requirements, specifically including Integrated Circuits and Display Panels, with top Downstream company representatives being TSMC, Samsung Electronics, and BOE Technology. As the global semiconductor industry continues to advance toward finer process nodes (such as 5nm, 3nm) and display panel technologies (such as OLED) iterate, the demands for process environment purity and temperature control precision constantly increase. Semiconductor Grade Helium Gas, due to its high thermal conductivity and inert nature, faces continuous upgrades in usage volume and purity requirements in critical steps like DUV lithography, etching,

and vapor deposition. Given the certain trend of global fab capacity expansion and the inherent scarcity of helium resources, the Semiconductor Grade Helium Gas market is poised to maintain a high level of prosperity and possesses continuous structural growth potential in the coming years.

The global Semiconductor Grade Helium Gas market size was estimated at USD 136.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
