Report Overview

Electronic grade high-purity ammonia can usually be divided into three types based on purity: 99.999% (5N), 99.9999% (6N), and 99.9999% (7N, i.e. ultra pure). In specific applications, there are significant differences in the requirements for electronic grade high-purity ammonia used in different processes. Generally speaking, the requirements for the electronic grade high-purity ammonia required for solar cell production are relatively low, and electronic grade high-purity ammonia with a purity of 99.9995% is commonly used in China, The foreign solar cell industry uses 99.9994% of electronic grade high-purity ammonia more frequently. The requirements for electronic grade high-purity ammonia used in light-emitting diodes (LEDs), integrated circuits (ICs), and liquid crystal displays (LCDs) are relatively high, with some fields requiring 99.9999% (7N) of electronic grade high-purity ammonia.
