## Abstracts

Semiconductor high purity gas purifiers are specialized devices used in the semiconductor manufacturing industry to remove impurities from gases used in various fabrication processes. These purifiers are crucial for ensuring the quality and reliability of semiconductor devices, as even trace amounts of impurities can have significant effects on device performance and yield. Purification capabilities play an increasingly critical role in semiconductor manufacturing as shrinking geometries and multi-layering are significantly increasing gas consumption per processed wafer. Gas purifier is used to clean gases, reducing the risks of column damage, sensitivity loss, and instrument downtime. Inserting a Gas Clean Filter System in the gas line immediately before the instrument inlet greatly reduces the level of impurities that can lead to defects on the Deposition. This report focuses on the gas purifiers for semiconductors, key applications include Deposition (MOCVD, PVD, CVD, Epitaxy, ALD) are the largest application, with a share about 45%, followed by Photolithography, etching (wet etch, dry etching), and other applications (wafer growing, diffusion and oxidation processes, stocker cleaning and purging, FOUP Cleaning and purging, etc.). The global semiconductor gas purifiers market is dominated by few players like Entegris and Pall Corporation. Entegris is the largest manufacturer of semiconductor gas purifiers, with a share of over 70 percent, followed by Pall Corporation and Taiyo Nippon Sanso (Matheson). North America is the largest market with about 85% market share, followed by Japan with about 13% market share. In terms of product type, the point of use gas purifiers are dominating the semiconductor market, with a share over 65% in value. In terms of applications, Deposition are the largest application, with a share about 40%, followed by photolithography. The global market for semiconductor was estimated at US\$ 526.8 billion in the year 2023, is projected to US\$ 780.7 billion by 2030. IC Manufacturing is the process used to manufacture semiconductor devices, typically integrated circuits (ICs) such as computer processors, microcontrollers, and memory chips (such as

NAND flash and DRAM). According to our research, the global semiconductor manufacturing (wafer fabrication) market is projected to grow from US\$ 251.7 billion in 2023 to US\$ 506.5 billion by 2030, at a Compound Annual Growth Rate (CAGR) of 40.49% during the forecast period. This will drive rapid growth of global Semiconductor Gas Purifiers.

The global Semiconductor High Purity Gas Purifiers market size was estimated at USD 256.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
