Abstracts

Semiconductor Logistics and Semiconductor Shipping Service refer to a professional logistics and transportation service system covering the entire semiconductor industry chain (silicon wafers, wafer manufacturing, packaging and testing, equipment, materials, specialty gases, spare parts, etc.). Through technical capabilities such as high cleanliness, ESD protection, temperature control, hazardous materials compliance, precision equipment handling, and high-value cargo security, it enables the safe, efficient, and low-loss flow of semiconductor products globally. Services include wafers, bare dies, finished chips, photomasks, photoresists, high-purity chemicals, specialty gas cylinders, ultra-high-value equipment, and a large number of MRO spare parts. Unlike general logistics, semiconductor products are extremely sensitive to vibration, tilt, temperature and humidity, contamination control, and safety tracking. Therefore, logistics services typically include specialized packaging (FOUP/FOSB, ESD boxes, temperature-controlled boxes), Shock/tilt monitoring, Clean Warehouse, bonded warehousing, NFO/emergency transportation, and other high-level capabilities, serving as critical infrastructure for ensuring the stable operation of the semiconductor supply chain.The upstream of the semiconductor logistics industry chain includes specialized packaging materials (FOUP/FOSB, cleanroom packaging, shockproof boxes), temperature control equipment, anti-static consumables, hazardous chemical transport containers, and digital IoT tracking equipment. The midstream consists of core service providers, namely 3PL/4PL companies, semiconductor-specific logistics companies, and engineering logistics providers, offering comprehensive services such as international air and sea freight, bonded warehousing, hazardous chemical logistics, temperature-controlled transportation, precision equipment handling, fab relocation, VMI spare parts management, and in-fab logistics operations. Typical suppliers include DHL, Kuehne+Nagel, Nippon Express, Omni, Yusen, and Dimerco, as well as specialized

logistics companies focusing on equipment transportation or specialty chemical transportation. Downstream customers cover foundries, IDMs, OSATs, equipment manufacturers, semiconductor material companies, and regional industrial parks, with logistics needs spanning the entire lifecycle from R&D, pilot production, mass production, capacity expansion, equipment upgrades, and production line relocation.With global wafer fab expansion, increased complexity of advanced processes, and accelerated globalization of supply chains, semiconductor logistics and shipping services will maintain medium-to-high-speed growth. The unit value of high-value wafers continues to rise (advanced process wafers are worth tens of thousands of US dollars per wafer), significantly increasing the demand for transportation safety and traceability. The increasing proportion of hazardous materials and temperature-controlled products such as photoresist, specialty gases, and high-purity chemicals is driving the expansion of hazardous chemical compliance and temperature-controlled logistics capacity. Simultaneously, equipment relocation and production line relocation are becoming industry norms, spurring rapid growth in engineering-oriented fab relocation logistics. With the advancement of regionalized manufacturing (the US CHIPS Act, the European chip law, and localized manufacturing in China), logistics companies will upgrade from "transporters" to "supply chain operators," exhibiting high barriers to entry and high added value with long-term growth potential.

The global Semiconductor Logistics and Semiconductor Shipping Service market size was estimated at USD 55460.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
