## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Semiconductor and Optical Quartz Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Semiconductor and Optical Quartz Materials refer to high-purity silicon dioxide (SiO<sub>2</sub>)-based quartz materials produced through processes such as flame fusion, electric fusion, or vapor phase synthesis, resulting in either amorphous structures or low-defect crystalline forms. These materials are characterized by excellent optical transparency, thermal stability, electrical insulation, and chemical inertness, making them essential base materials in semiconductor manufacturing and precision optical systems. In the semiconductor industry, quartz is used in high-temperature, high-purity environments for integrated circuit and chip fabrication, with typical product forms including quartz ingots, rods, and plates. In optical applications, quartz materials are used to manufacture high-transmission optical components across the ultraviolet, visible, and infrared spectra, with common forms such as quartz ingots, quartz glass blocks, optical blanks, and rods.

The global Semiconductor and Optical Quartz Materials market size was estimated at USD 634.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
