Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Semiconductor Packaging Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Semiconductor packaging film, also known as adhesive film, is a pre-formed solid adhesive material widely used in advanced packaging processes. Unlike tapes that are mainly designed for temporary protection, packaging films provide structural bonding, insulation, and stress relief functions in semiconductor devices. They are typically made from epoxy, acrylic, or modified resin systems, supplied in uniform thickness to ensure reliable lamination and minimal contamination. These films are extensively applied in chip-to-substrate bonding, wafer-level packaging, MEMS, 3D ICs, and advanced fan-out or system-in-package (SiP) assemblies. The main advantages include precise thickness control, high bonding strength, good thermal stability, and excellent long-term reliability, making them critical for miniaturized, high-performance semiconductor devices. In 2024, global Semiconductor Packaging Film sales reached approximately 21,600 k Sqm, with an average market price of around 18 USD/Sqm.

The global Semiconductor Packaging Film market size was estimated at USD 389.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Semiconductor Packaging Film market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
