Report Overview

Semiconductor plastic packaging press is a kind of equipment used in the packaging process of semiconductor chips. During semiconductor packaging, chips are usually encapsulated in plastic encapsulation materials to provide protection and connect circuits. The plastic packaging press is used to press the chip and packaging material to ensure that the packaging material is firmly fixed on the chip and to ensure the reliability of the circuit connection. These presses typically include heating and cooling functions to control the temperature of the potting material, as well as a pressure control system to ensure proper press force. Semiconductor plastic packaging presses play a key role in the semiconductor industry and are used to produce various types of packaged chips, such as QFP (Quad Flat Package), BGA (Ball Grid Array), etc.
