### Report Overview:

Residual gas analyzer (RGA) is a mass spectrometer that can effectively measure the chemical composition of gases present in low-pressure environments. The residual gas analyzer actually ionizes various components of the gas to generate various ions, and then detects and determines the mass to charge ratio. This process works better in vacuum, where quality is easier to monitor, and impurities and inconsistencies are more easily detected due to low pressure.

The Global Semiconductor Residual Gas Analyzer Market Size was estimated at USD 107.03 million in 2023 and is projected to reach USD 145.91 million by 2029, exhibiting a CAGR of 5.30% during the forecast period.
