Abstracts

Semiconductor surface grinding wheels are specialized abrasive tools used in the manufacturing process of semiconductor wafers. These grinding wheels are designed to achieve precise and smooth surfaces on semiconductor materials, such as silicon, gallium arsenide, and silicon carbide, during wafer thinning, polishing, and dicing processes. They are made from high-performance abrasives like diamond or CBN (cubic boron nitride), offering superior cutting power and durability. The surface grinding process ensures that the semiconductor wafers meet the strict flatness, thickness, and surface roughness requirements essential for the production of high-performance integrated circuits (ICs), sensors, and other semiconductor devices. These wheels are crucial in semiconductor fabrication, especially in the final stages of wafer preparation before device assembly.

The global Semiconductor Surface Grinding Wheels market size was estimated at USD 158.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
