## Abstracts

Stable and precise control of a processing system's vacuum pressure is critical for high-yield semiconductor device fabrication. Processes such as SAPCVD, LPCVD and etch exhibit optimal behavior at well-defined process pressures and it is critical to maintain and transition process pressures in a well-controlled, stable manner. Similarly, advanced processes such as ALD must have tight control over system pressures during gas switching steps. The required vacuum pressure control in these and other semiconductor unit processes is accomplished using closed-loop control for a number of variables that affect the vacuum process. Semiconductor Vacuum Sensors play important roles during the process. Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.10% year-on-year.

The global Semiconductor Vacuum Sensors market size was estimated at USD 378.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
