## Abstracts

Semiconductor Wafer Polishing Pad is a product which increases semiconductor integration by smoothening the semiconductor wafer surface through physical and chemical polishing processes. The global key players of CMP Pads include DuPont, Entegris, Fujibo, TWI Incorporated, 3M, FNS TECH, IVT Technologies, SK enpulse, KPX Chemical and Hubei Dinglong, etc. The global five biggest players hold a share of 92.36% in 2022. At present, considering the cost and the influence of the size of silicon wafers on the performance and efficiency of integrated circuits, the increase in the size of wafers is an inevitable trend and a mainstream trend, in particular, 8-inch and 12-inch. Wafer may develop in the direction of 18 inches in the future. However, the larger the size, the more difficult it is to produce the corresponding CMP pad. When the downstream size becomes an inevitable trend, in order to occupy the market, it is necessary to be able to develop large-size pad, otherwise it will be eliminated by the market. With the expectation of the superior performance improvement of integrated circuits, the polishing performance of CMP pads has to be increased, so its performance in the future must be more stringent.

The global Semiconductor Wafer Polishing Pad market size was estimated at USD 996.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
