Abstracts

A Sendust core is a type of magnetic core material commonly used in the manufacturing of inductive components like transformers, inductors, and chokes. Sendust is an alloy composed primarily of iron, silicon, and aluminum, and it has several notable properties that make it suitable for certain electronic applications. As the demand for miniaturization and efficiency of electronic devices continues to increase, Sendust Core has become an ideal choice for the power electronics and communications industries due to its low loss, high magnetic permeability and good temperature stability. In particular, in the fields of 5G communications, automotive electronics, home appliances and green energy, the growing demand for high-performance magnetic materials has driven the rapid development of the Sendust Core market. We expect the Sendust Core market to grow steadily in the future, and this growth is mainly driven by the following factors: First, with the continuous advancement of power electronics and high-frequency communication technology, the demand for high-efficiency and low-loss magnetic materials is increasing; second, the acceleration of the electrification and intelligentization of automobiles, especially the demand for high-efficiency electromagnetic materials in the field of new energy vehicles, has further promoted the application of Sendust Core; in addition, with the continuous development of green energy technology, especially in solar energy conversion systems, Sendust Core materials also have more and more extensive application prospects. Despite the huge market potential, the Sendust Core market also faces certain challenges, such as fluctuations in raw material prices and optimization requirements for manufacturing processes. However, with technological advances and improved production efficiency, the cost of Sendust Core is expected to be further reduced, promoting its popularization in various fields. Overall, the Sendust Core market will maintain its growth trend in the next few years and become an indispensable and important part of the electronics and energy industries.

The global Sendust Core market size was estimated at USD 336.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.
