Report Overview

Separation Machinery is a equipment that can separate a solution or mixture of chemical elements into two or more discrete product mixtures.

A separation process is a method that converts a mixture or solution of chemical substances into two or more distinct product mixtures. At least one of results of the separation is enriched in one or more of the source mixture's constituents. In some cases, a separation may fully divide the mixture into pure constituents. Separations exploit differences in chemical properties or physical properties (such as size, shape, mass, density, or chemical affinity) between the constituents of a mixture. Various end-use industries including: petrochemicals, food processing, healthcare, wastewater treatment, transportation and others rely on separation technologies to provide cleaner and sustainable solutions.
