Abstracts

Serial Data Fibre Modems are specialized communication devices designed to transmit serial data signals over fibre optic cables, converting electrical signals from serial interfaces (such as RS-232, RS-422, or RS-485) into optical signals for long-distance, high-speed, and noise-immune data transmission. These modems are critical in industrial automation, telecommunications, transportation systems, and utility networks where reliable data transfer over extended distances is required, and they often feature galvanic isolation to protect equipment from electrical surges and ground loops. Key characteristics include support for various data rates, protocol transparency, ruggedized designs for harsh environments, and compatibility with both single-mode and multi-mode fibre, making them essential for bridging legacy serial equipment with modern fibre optic infrastructure.

The global Serial Data Fibre Modems market size was estimated at USD 485.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
