Report Overview

The serrated face nut is a specialized fastener designed with serrations or teeth on its bearing surface to enhance grip and prevent loosening under vibration or dynamic loads. These nuts are commonly used in automotive, aerospace, construction, and industrial machinery applications where secure fastening is critical. The serrated face creates friction against the mating surface, reducing the need for additional locking mechanisms like washers or adhesives. Available in various materials, including steel, stainless steel, and brass, serrated face nuts are standardized under industry specifications such as DIN or ASTM, ensuring compatibility and reliability. Their design balances ease of installation with high resistance to torque loss, making them a preferred choice in high-stress environments.
