Report Overview

Serum-free medium (SFM) for CHO culture refers to a specialized type of cell culture medium that does not contain any animal-derived serum components. SFM is designed to support the growth and productivity of Chinese hamster ovary (CHO) cells, which are commonly used in the production of biopharmaceuticals. This medium typically contains essential nutrients, growth factors, and supplements necessary for CHO cell growth and protein production. By eliminating serum from the culture medium, SFM reduces the risk of introducing contaminants and variability into the cell culture process, ultimately leading to more consistent and reliable biopharmaceutical production.

The market for SFM for CHO culture is experiencing significant growth driven by several key factors. One of the primary drivers is the increasing demand for biopharmaceuticals, such as monoclonal antibodies, vaccines, and recombinant proteins, which require CHO cells for production. As the biopharmaceutical industry continues to expand, there is a growing need for efficient and reliable cell culture media like SFM to support large-scale production. Additionally, regulatory agencies are placing greater emphasis on the quality and safety of biopharmaceutical products, prompting manufacturers to adopt serum-free culture systems to meet stringent regulatory requirements. Moreover, advancements in cell culture technology and the development of novel SFM formulations are further fueling market growth by improving cell culture performance and productivity.
