## Abstracts

Freezing media which contain sera have the disadvantage of a fluctuating and not defined composition. Reproducibility of experiments with cells which were stored in a serum containing medium, could be affected by the usage of a different charge of the corresponding medium, since the composition of serum varies from batch to batch and only a limited amount of each batch is available. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets.
