Abstracts

The Server Decommissioning Service is a professional, systematic IT asset management process designed to safely, compliantly, and cost-effectively remove retired servers from production environments. Its core goes beyond physical removal; it's a comprehensive solution that integrates data security, asset value recovery, and environmentally friendly disposal. The service first ensures complete data erasure, employing methods such as software erasure or physical destruction that adhere to international standards, ensuring that sensitive information cannot be recovered and providing audit proof. Secondly, by assessing the residual value of the hardware, the equipment is resold, transferred internally, or recycled for parts to maximize asset value. Finally, worthless equipment components are environmentally disassembled and sorted, and handed over to qualified partners for resource recovery or harmless disposal to meet environmental regulations. The entire process is integrated with rigorous project management, logistics tracking, and documentation, forming a closed-loop management system that controls security risks, optimizes costs, and fulfills social responsibility. It is a crucial and final step in enterprise IT governance.

The global Server Decommissioning Service market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
