## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Server Molding Chokes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global server molding chokes sales reached approximately 398 million units, with an average global market price of around 371.2 US\$/k unit. Server molding chokes are advanced inductive components specifically designed for power management in servers, data centers, and high-performance computing systems. Unlike traditional SMD inductors, they are manufactured through a molding process that integrates metal magnetic powder with conductive coils, offering superior current-handling capability, low DC resistance (DCR), excellent thermal dissipation, and enhanced EMI suppression. These characteristics make them essential for applications such as server power converters, CPU/GPU voltage regulation modules (VRMs), and other high-efficiency DC-DC conversion systems.

The global Server Molding Chokes market size was estimated at USD 148.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 25.20% during the forecast period.
