Report Overview

Serverless services, also known as Function-as-a-Service (FaaS), are cloud computing solutions that allow developers to build and run applications without managing underlying infrastructure. These platforms automatically scale compute resources in response to demand, executing code in stateless, event-triggered functions?eliminating the need for server provisioning, patching, or capacity planning. Key features include pay-per-use pricing, seamless integration with other cloud services, and support for multiple programming languages. Major providers like AWS Lambda, Azure Functions, and Google Cloud Functions dominate the space, offering tools for microservices, APIs, and real-time data processing. The technology is increasingly adopted for its cost efficiency in sporadic workloads, though cold start latency and vendor lock-in remain challenges. Growth is driven by digital transformation, IoT expansion, and the shift toward event-driven architectures.

The global Serverless Services market size was estimated at USD 1347.15 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 22.50% during the forecast period.
