Abstracts

Sevoflurane is a volatile anesthetic commonly used for induction and maintenance of general anesthesia during surgical procedures. It is favored for its rapid onset and offset of action, making it ideal for both adults and pediatric patients. Sevoflurane is typically inhaled and works by depressing the central nervous system, leading to a reversible loss of consciousness and sensation. Its minimal airway irritation and low blood solubility contribute to smoother anesthesia induction and quicker recovery times compared to other anesthetics. Sevoflurane is widely used due to its safety profile and ease of administration. The key driver for the Sevoflurane market is the increasing number of surgeries worldwide, driven by the aging population and the rising prevalence of chronic conditions requiring surgical intervention. Sevoflurane is highly preferred due to its rapid onset and recovery, making it ideal for both pediatric and adult patients, particularly in outpatient surgeries. Technological advancements in anesthesia delivery systems and the growing demand for minimally invasive procedures have also contributed to the rising adoption of Sevoflurane in clinical settings. Furthermore, the safety and effectiveness of Sevoflurane in maintaining stable cardiovascular function during anesthesia have enhanced its demand. One of the main challenges in the Sevoflurane market is its high cost compared to other anesthetic agents, which can limit its accessibility in low- and middle-income regions. Additionally, environmental concerns regarding the use of volatile anesthetics like Sevoflurane, which contribute to greenhouse gas emissions, have led to increased scrutiny and calls for more sustainable alternatives. Regulatory restrictions and the availability of generic alternatives may further impact the market growth, as healthcare providers seek more cost-effective or environmentally friendly options.

The global Sevoflurane For Inhalation market size was estimated at USD 1195.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60%

during the forecast period.
