Abstracts

SF6-free Switchgear is an environmentally friendly electrical switchgear used for the distribution, control and protection of current in power systems. Unlike traditional switchgear that uses sulfur hexafluoride (SF6) as an insulating and arc-extinguishing medium, SF6-free Switchgear uses alternative insulating and arc-extinguishing media such as dry air, vacuum technology, solid insulating materials or environmentally friendly gas mixtures (such as C4-FN). This design reduces the impact on the environment and reduces greenhouse gas emissions while maintaining high reliability and safety performance. SF6-free Switchgear complies with increasingly stringent environmental regulations around the world and is a key product in the power industry's transition to sustainable development.

The global SF6-free Switchgear market size was estimated at USD 1633.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
