Report Overview

The main area of application for the non-flammable gas sulphur hexafluoride (SF6) is insulation of electrical high-voltage switchgears, transformers and cables. Although sulphur hexafluoride is non-toxic and non-flammable, its global warming potential is about 24,000 times higher than carbon dioxide (GWP=23,900). That makes it the most potent of all greenhouse gases, which is why its use is subject to the most stringent environmental regulations. In addition, sulphur hexafluoride is odourless and heavier than air, so that it can accumulate in case of SF6 leaks in low-lying areas of the gas-insulated switchgear. Without reliable SF6 monitoring with SF6 gas sensors there would be a danger of asphyxiation for the workers.
