Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SFP28 Direct Attach Copper (DAC) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global SFP28 Direct Attach Copper (DAC) production reached approximately 3,574 K units, with an average global market price of around US\$ 85/unit. SFP28 Direct Attach Copper (DAC) is a factory-terminated SFP28-form twinax copper cable assembly (commonly called SFP28 DAC), designed as a low-cost, short-reach, direct-connect solution for 25Gb/s single-lane links; each end is an SFP28 style plug molded/assembled onto twinax copper (passive) or with embedded electronics (active/passive variants), offering very low latency and power compared with optical modules for short rack/row connections. Upstream inputs are copper twinax conductor and shielding, SFP28 housing/contacts, molded connector tooling, PCB/connector hardware, EMI shields and automated assembly/test equipment; downstream applications are server-to-switch and switch-to-switch short-reach links in data centers (ToR / leaf-spine), top-of-rack interconnects, 25G NIC connections, storage/SAN short links and some appliance/backplane uses. The production capacity of a single line is highly dependent on the level of automation, with semi-automated lines far lower than highly automated multi-line plants. Product gross profit margins typically range from 15% to 30%.

The global SFP28 Direct Attach Copper (DAC) market size was estimated at USD 304.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.20% during the forecast period.
