Abstracts

Shaft earthing protection refers to a specialized electrical safety system designed to prevent hazardous voltage build-up and discharge in rotating machinery shafts, particularly in large industrial equipment such as turbines, generators, and motors, by providing a reliable path to ground for stray currents induced by electrostatic charges or electromagnetic asymmetry. This system typically includes components like carbon brushes, brush holders, grounding assemblies, and monitoring devices to ensure continuous electrical contact between the rotating shaft and the grounded stationary structure, thereby mitigating risks of bearing damage, electrical arcing, operational failures, and potential safety hazards to personnel.
