Abstracts

A shafted screw conveyor is a mechanical conveying system that utilizes a rotating helical screw blade, known as a flighting, mounted on a central shaft within a stationary trough or tube to move bulk materials horizontally, at an incline, or vertically. The central shaft provides structural support and torque transmission, allowing the system to handle a wide range of materials—from powders and granules to abrasive or semi-solid substances—with varying degrees of efficiency, depending on factors such as screw pitch, rotational speed, and material characteristics. Commonly employed in industries such as agriculture, food processing, mining, wastewater treatment, and chemical manufacturing, this type of conveyor is valued for its reliability, simplicity of design, and ability to provide controlled, consistent material flow in both batch and continuous operations.

The global Shafted Screw Conveyor market size was estimated at USD 220.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
