Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sharing Power Bank Stations competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. By 2024, global sales of sharing power bank stations will reach approximately 2.86 million units, with an average price of \$530 per device. These intelligent hardware terminals, deployed in public places such as shopping malls, restaurants, airports, train stations, and hospitals, allow users to rent power banks by scanning a QR code. These terminals typically feature multiple interfaces, an online management system, and back-end settlement capabilities, enabling operators to implement large-scale distributed management and flexible pricing. In recent years, the market has benefited from high-frequency, fragmented electricity demand, the widespread adoption of mobile payments, and the penetration of the sharing economy model, particularly in core business districts in Asian and European cities. However, the market also faces competitive pressure from fast-charging, long-lasting battery life, and portable energy storage alternatives. The upstream and downstream players primarily include suppliers of battery cells, power management chips, housing modules, and payment modules, as well as downstream operating platform providers, scenario partners (such as chain stores), and end consumers, forming a complete shared charging service ecosystem. Leading companies are breaking through user experience bottlenecks through fast-charging technology. For example, Zhumang Technology's Caibao 3.0Pro supports 22.5W super-fast charging, charging a phone from 20% to 80% in 30 minutes. Its infrared communication sensor increases the return success rate to 99.9%. At the same time, the intelligence level of equipment has significantly increased, enabling real-time monitoring, fault warnings, and remote operation and maintenance through IoT platforms. Traditional catering scenarios still dominate, but emerging

scenarios such as transportation hubs, scenic spots, and hospitals are growing rapidly, with the number of transportation locations increasing by 40%-70% by 2023. Overseas markets such as Southeast Asia have become new growth drivers, and companies are rapidly expanding their locations in Southeast Asia through the integration of localized payment systems and adaptation to high-temperature and high-humidity environments.

The global Sharing Power Bank Stations market size was estimated at USD 1521.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.20% during the forecast period.
