Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Shark Fin Antenna competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Shark Fin Antenna is a compact, aerodynamically designed automotive antenna mounted on the roof of a vehicle. Named for its resemblance to a shark's dorsal fin, it integrates multiple wireless communication functions such as AM/FM, GPS, GNSS, LTE, 5G, Wi-Fi, and V2X into a single module. It enhances signal reception, reduces drag, and provides a sleek aesthetic, making it a preferred choice for modern vehicles. The shark fin antenna has become a standard feature in modern vehicles, evolving from a simple FM/AM receiver to a multifunctional communication hub. Its aerodynamic shape, integration capability, and aesthetic advantages have made it a preferred design in automotive antenna systems. As the industry pivots toward connected and autonomous vehicles, shark fin antennas are now designed to support a wide range of functionalities, including GPS, GSM/LTE, DAB, satellite radio (XM/Sirius), and increasingly, 5G-V2X and UWB positioning. The technology landscape is shifting towards high-performance ceramic or embedded metal elements within weather-resistant plastic housings. In premium vehicles, shark fin antennas equipped with MIMO structures are being adopted to support 5G and redundancy in autonomous communication systems. The trend is to integrate more sensing and communication hardware like millimeter wave modules and V2X chips into a single compact housing. Regionally, Asia-Pacific especially China, Japan, and South Korea dominates production and consumption due to the booming electric vehicle and smart car segments. In North America and Europe, demand for high-bandwidth antennas is rising rapidly due to stricter vehicle connectivity regulations and the increasing adoption of ADAS/AV systems. With the global push toward platform-based automotive

architecture, OEMs are seeking flexible and customizable antenna solutions that can be seamlessly integrated into car design. In the future, the shark fin antenna will evolve into a centralized communication and perception node on the vehicle, serving as a key enabler for over-the-air updates, V2X communication, real-time navigation, and autonomous driving functions.

The global Shark Fin Antenna market size was estimated at USD 1049.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
