Abstracts

A sharp teeth milling cutter is a rotary cutting tool used in machining operations, typically featuring multiple teeth with sharp, distinct cutting edges designed to remove material from a workpiece through mechanical shearing. These cutters are commonly manufactured from high-speed steel (HSS), carbide, or other hardened materials to withstand high cutting forces and temperatures. They are employed across various milling applications?such as face milling, slotting, and profiling?in industries like automotive, aerospace, mold making, and general metalworking. The design prioritizes efficient chip evacuation, precision, and durability, with geometries and tooth counts tailored to specific materials (e.g., aluminum, steel, composites) and operational requirements.
