Report Overview

Shea oil is fractionated from Shea butter. As the Oleic oil melts at a lower temperature it is removed from the more solid butter and contains less than Stearic fatty acid that gives Shea butter the solid, waxy consistency, so not only will it not revert back to the consistency of the butter, it now has taken on its own unique rich but light texture.

Shea Oil contains approximately:

27% stearic acid

59% oleic acid

9% linoleic acid

5% palmitic acid
