Abstracts

A sheet metal chassis is a structural framework typically made from thin sheets of metal, such as steel or aluminum. It serves as the base or skeleton upon which various components of a machine, device, or piece of equipment are mounted. The sheet metal is usually cut, bent, and welded together to form a rigid and durable structure that can withstand the forces and stresses associated with the operation of the attached components. In many applications, like in electronics enclosures, automotive bodies, or industrial machinery, the sheet metal chassis provides mechanical support, protection to internal parts from external impacts and environmental factors, and also helps in organizing and securing the different elements in a specific layout for efficient functioning.

The global Sheet Metal Chassis market size was estimated at USD 2948.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
