Abstracts

Shelf Supported Mezzanines are elevated platforms that rely on shelving systems as their primary structural support. These mezzanines are designed to maximize floor space by utilizing the vertical height of a facility, with the shelving units acting as both storage and structural elements. The shelves are typically designed to bear the weight of the mezzanine floor, allowing for efficient use of space without the need for additional columns or beams. This type of mezzanine is commonly used in warehouses or distribution centers, where the shelving provides storage solutions while supporting the mezzanine above.
