## Abstracts

Shellac powder is a natural resin product, which is a powdered substance made from the resin secreted by the lac insect (*Laccifer lacca*). The lac insect parasitizes on the branches of certain trees (such as some trees in tropical and subtropical areas), and secretes a sticky resinous substance by sucking sap. This substance becomes shellac powder after being collected, purified and processed. The main production areas of shellac are concentrated in tropical and subtropical Asian countries such as India, Thailand, and Myanmar. These areas have climatic conditions and host trees suitable for the growth of lac insects.

The global Shellac Powder market size was estimated at USD 786.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
