Report Overview

A shielded video cable is a cable used to transmit video signals, and its main feature is that it has a shield to protect the signal from external electromagnetic interference. The shield can be made of a material such as aluminum foil, copper foil, or a braid that wraps around the center conductor and insulation of the cable. The shielding layer can effectively reduce the influence of external electromagnetic interference on the video signal, and improve the transmission quality and stability of the video signal. In addition, shielded video cables usually have the characteristics of high bandwidth, low transmission loss, and strong anti-interference, and are often widely used in surveillance, video conferencing, radio and television and other fields.
