Report Overview

In traditional modules, the cells are connected by welding ribbons, while the shingling technology uses conductive glue instead of the welding ribbons. The welding tape may crack when heated, and the conductive adhesive is low-temperature welding, which makes the shingled assembly more reliable. The quality of conductive adhesive plays a decisive role in the reliability of shingled components and is also an important part of the production cost of shingled components. Conductive glue is mainly used in the lamination and curing process.
