Abstracts

Ship anti-corrosion materials refer to a specialized category of protective coatings, inhibitors, and systems designed to prevent the degradation of vessel structures caused by environmental factors such as saltwater, humidity, and microbial activity. These materials include epoxy and polyurethane coatings, sacrificial anodes (e.g., zinc or aluminum alloys), corrosion-resistant alloys, and advanced polymer composites, all engineered to extend the operational lifespan of ships by mitigating rust, pitting, and structural weakening. The effectiveness of these solutions depends on factors like application methods, substrate preparation, and compatibility with marine conditions, making them essential for maintaining safety, reliability, and cost-efficiency in maritime operations.

The global Ship Anti Corrosion Material market size was estimated at USD 1245.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
